## WILD CARD

**Task 1 - An Investigation of Weather-Measuring Instruments**  
We listened to a presentation given by a weather expert and needed to quickly learn as much as we could, as the information would be useful in the task segment. We were presented with questions such as identifying each instrument, explaining their use, as well as solving for a few weather situations based on data given. Overall, this task was rather challenging as we had to work with the short time given!

**Task 2 - We were tasked to utilise satellite and geography knowledge to complete another weather related task. We had to find the radius of the different weather radars and solve different problems that weather scientists faced. It was an enriching task and we had fun!**
